PROFILE

Software engineer with 3+ years of experience in developing and maintaining scalable and reliable web applications. Proven ability to work independently and as part of a team to design, implement, and test complex software solutions. Expertise in Python, Django, JavaScript, HTML, and CSS. Passionate about building innovative and user-friendly products.

WORK EXPERIENCE

Software Engineer

Priro systems Inc. present

- Excited to be a member of the team at **Autire**, a new product that will transform the **401(k) audit** industry
- Developed and implemented innovative data preprocessing and utility functions that helped Autire and its DevOps teams achieve significant productivity gains.
- Developing **RPA bots** to automate repetitive and time-consuming tasks for our service providers, such as downloading customer orders, product data sheets, and invoice PDFs and storing them in AWS S3. This will streamline their workflows, improve their efficiency, and free up their time to focus on more strategic initiatives.
- Also using AWS technologies such as EC2 to deploy and manage virtual machines, S3 to store and manage object storage, and DynamoDB to store and manage NoSQL data to build and maintain our cloud-based applications. This has helped us to improve our scalability, reliability, and cost-effectiveness.

Associate Developer

Zencon Infotech Pvt Ltd 2019 - 2020

- Developed and implemented an **employee attendance system** using Python and Django that is currently live in our company. The system has helped us to improve the accuracy and efficiency of our attendance tracking process, and it has also reduced our administrative costs.
- Also developed a web portal for our company's client that synchronizes with their SAP database and syncs daily transactions. The portal allows them to generate invoices and create purchase orders, and it was developed using Django.
- I successfully completed the portal project on my own, learning a great deal about Django, JavaScript, HTML, and CSS along the way. I also contributed to the development of a custom theme for the portal, which is now used by two of our clients.
